## Full bleed image of an ultrasound being used

Whether you're an experienced user with years of ultrasound training or a novice with basic knowledge, you'll find the SonixTablet VET easy to learn and use

### SonixOne

- Customizable touch screen saves time
- Multiple Imaging Modes
- Internet connectivity for remote support and more

**SonixTablet - Mountable ultrasound system with 19" touch screen**

SonixTablet can be mounted from the ceiling or wall to preserve floor space. With no buttons and knobs for bacteria to hide behind, the SonixTablet is easy to keep clean. Its extra large screen and excellent image quality helps clinicians place needles more precisely during interventional procedures. You can connect two transducers to the SonixTablet.

### Connectivity options for sharing studies

Ultrasonix systems supports multiple data ports including USB, Ethernet, DVD, CD and DVI video connections. Transfer data easily and upgrade your system using accessible USB ports and Internet connectivity.

### SonixDVR - record an entire exam in a small file

With SonixDVR, it's easy to playback, archive and share past exams in the popular MPEG movie format. Start and stop a recording with one touch of a button. You can also share the file with colleagues and patients. Unlike traditional ultrasound systems, which only record video for a short time, SonixDVR records long videos in high definition directly on the system.

### Multiple Imaging Modes

SonixTablet supports all basic imaging modes such as B Mode, M Mode, Pulsed Wave Doppler, Color Doppler, Continuous Wave Doppler, Panoramic, Compound and Elastography.

Ever needed help while doing an Ultrasound scan?

### Remote Assisted Sonography – SonixTelemed

SonixTelemed is designed for veterinarians or hospital staff who are new to ultrasound diagnostics. OP Diagnostics provides integrated support and education to improve skills or to obtain proper ultrasound examinations for interpretation. Using an Internet connection, SonixTelemed and our remote support tool enables real-time interaction with an OP Diagnostics sonographer who can control the SonixTablet remotely. With an integrated HD camera, the sonographer can see how the patient is being scanned and offer tips on acquiring the proper scan. Ongoing ultrasound education and training is a key consideration. OP Diagnostics offers real-time support from trained sonographers and radiologists.

### Radiology Consultation

Oncura Partners Holding, INC offers veterinary-specific ultrasound technology that is user-friendly, real-time and state-of-the-art. Our sonographers can work online with you to obtain the scan for our radiology consultants.

Our sonographers are available to remotely connect to your machine to change settings and assist with scans.

Train on your time, in your practice with our online support. No more driving to weekend conferences and training on a different unit.

Radiology Consultant Team: Once you have obtained the scan, our radiology team will easily access and send you a consult.

### Schedule a Demo

## Mission

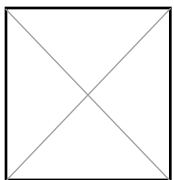

Oncura Partners strives to become the world leader in veterinary cancer care by providing diagnostic technologies, treatment advancements, clinical trials/research, and nurturing the human-animal bond.

## Vision and Philosophy

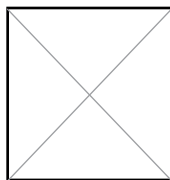

Oncura believes all veterinarians strive to administer the best possible care to their patients and we desire partnership with veterinarians and animal care specialists who share this common care philosophy.
